

How to access your committee roster...

All ASABE members can access committee rosters for up-to-date information.

1. Log in and select “Committees” from the top menu.

2. Select the blue “Committee Rosters” link.

Home > Committees

Committees

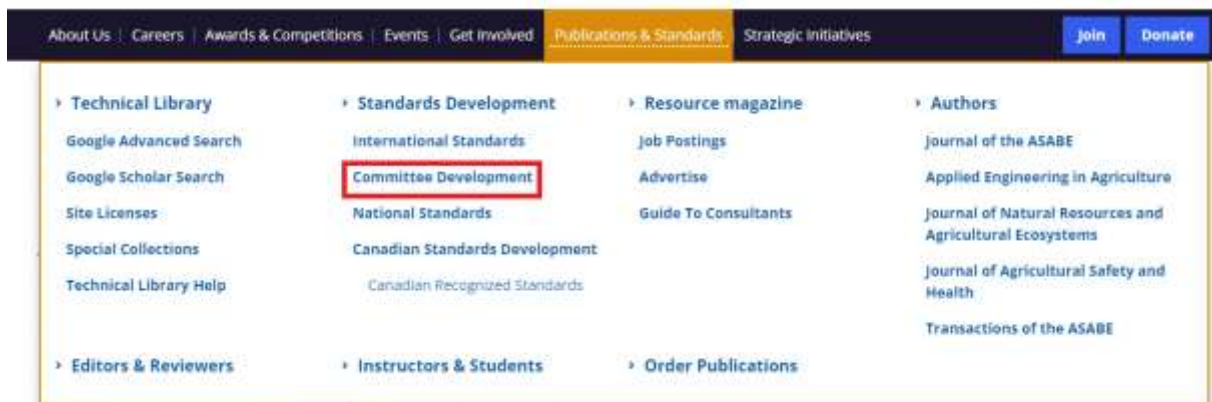

A member-driven organization, ASABE has committees and groups not only for every technical interest area within the ASABE scope, but also for carrying out the work of the Society: student activities, Society governance, peer recognition, professional development, conference planning, and publishing, including standards development. ASABE *Sections* and *international groups* offer the opportunity to network with other members of similar geographic residence or origin, while *membership communities* and *technical communities* offer engagement among members with related professional needs and interests. Review the Society [reporting structure](#) to see how the committees are organized.

Committee Opportunities That Fit Your Interests

Whatever your interest or professional need, there is an ASABE committee waiting to welcome you. Check out the list below, or review [comprehensive descriptions](#) of all our groups and use links to express your interest in joining.

Explore the list below and get involved. Not sure whether a group is right for you? Direct your questions to the administrator, shown in the committee search results, or log in to search [Committee Rosters](#) to identify and contact the committee chair.

3. Alternatively, go to “Publications & Standards.” In the drop down select “Committee Development” under “Standards Development”.

4. Click on the "Committee Rosters" link.

Home > Publications & Standards > Standards Development > Committee Development

Committee Development

ASABE Committee Rosters, available only to ASABE members.

[Committee Rosters](#)

ASABE welcomes participation in standards development. Non-members may join ASABE standards committees but will not enjoy the full range of member benefits, which include access to published standards, technical publications, and the ASABE membership and committee rosters. Learn more about ASABE member benefits [here](#).

To join a standards development committee as a non-member of ASABE, please complete the attached form and return it to an ASABE Standards Department staff member with your request.

Both options will take you to the Committee search page.

5. Click "Show all 258."

6. Scroll to select the committee.

ASABE Committees

Name	Description
AABEPIO Community	Association of Agricultural, Biological and Food Engineers of Indian Origin Community.
AETC Planning Committee	The AETC Planning committee and HQ staff organize and plan the annual Agricultural Equipment Technology Conference to promote collaboration within the Machinery Systems (MS) community. A single onsite meeting is held at the culmination of each year's AETC, followed by monthly, hour-long conference calls and, when possible, an ad-hoc meeting held at AIM. Communications between each month's meeting ensure timely completion of action items. At-will membership is open to all ASABE members, and committee members are added upon request. The leadership is voted into a four-year progression, from secretary to vice chair, chair, and past chair. AETC is a prime opportunity for those in the MS community, predominantly from the US but increasingly from across the globe, to network and learn about existing and developing trends and technologies within the field of agricultural equipment development. This event gives the MS committees a place to meet in-person to continue their critical work in the development and review of technical standards. With the AESO awards, student posters, and other focused sessions, the ABE profession and impact of the Society are on full display.
Alpha Epsilon	National officers of Alpha Epsilon Honor Society
ANGASABE Community	African Network Group of ASABE. To promote information exchange and networking among agricultural, biological and food engineers of African and Non-African origin that are interested in the development of agricultural technology in Africa; facilitate collaboration in research; foster educational exchange; enable technology transfer to Africa; and encourage professional development among members.
AOCASBE	AOCASBE - the Association of Overseas Chinese Agricultural, Biological, and Food Engineers promotes information exchange and networking among agricultural, biological, and food engineers of Chinese origin worldwide, to facilitate collaboration in research and educational exchange, and to encourage professional development.

7. Once your committee displays, select Export. This will provide you options for download.
